An easy-to-use and effective tool for quantifying individual and organisational exposure to risk from homeworking

SHARP supports employees to self-assess via online survey their risk when homeworking. A personalised Risk Assessment Report is immediately generated at completion identifying priority risk areas and advising on mitigating actions. A data dashboard aggregates responses providing business leaders with an understanding of the risk landscape from remote working. This understanding is key to strategic management and future planning for home or hybrid working.

1. Completion of the SHARP Survey Tool

SHARP covers key dimensions of risk using an online survey, created by risk experts, for your use with remote teams. Completion of questions rarely exceeds 10 minutes and needs no preparation.

2. Employee access to their SHARP Report

Once all questions are answered respondents are prompted to download their Risk Assessment. This document quantifies and prioritises risk before guiding respondents on required mitigation.

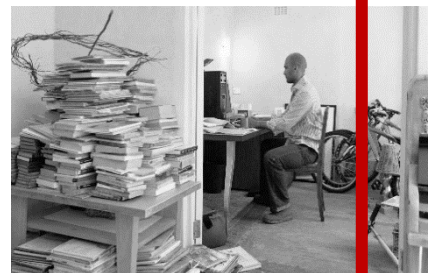

3. Line-management Information

Automated circulation of the individual risk assessment reports to a nominated individual or mailbox ensures the business may audit individual employee needs and compliance.

4. The SHARP Data Dashboard

Data captured in completion of the SHARP survey is easily accessed and conveniently presented to the client through the SHARP Data Dashboard.

5. Strategic analysis and solutions

Red Octopus risk experts will provide support to business leaders through in-depth analysis of data, identifying and prioritising key areas of vulnerability and providing tiered solutions.

'I was relieved and pleased that it [the SHARP Survey] was so quick to complete and my risk assessment report a one click download'

'The risks identified were not really news to me but seeing them in black and white did encourage me to get things sorted'

'ROS team advice focused attention on the gap between in-office data security and that of the remote team'

'Each step of the SHARP process involved minimal effort on our part - it was a painless with tangible benefits to our remote team and therefore the company'
